  - **Narc Gone<sup>®</sup> Products are environmentally safe.**
  - **No special training or storage requirements necessary.**
  - **Narc Gone<sup>®</sup> comes ready-to-use.**

# **NARC GONE<sup>®</sup>**

## **ON DEMAND DRUG DESTRUCTION**

**Tested and Verified by Laboratories and Scientific Services of the US Customs and Border Patrol to meet the DEA Standards for Drug Destruction**

- Effectively meets the DEA Standard for Non-Retrieveable (21 CFR Part 1300.05)
- Environmentally safe based on the EPA's standards for Solid Waste
- Environmentally Sustainable

Narc Gone<sup>®</sup> MX uses a proprietary chemical destruction solution that starts dissolving and adsorbing the drugs on contact. During this process, the drugs are adsorbed and neutralized by the mixture of activated carbon in the container. Narc Gone<sup>®</sup> MX is completely non-toxic and non-hazardous. Once the container is full, the included hardener can be added to the container. This hardener will transform the liquid into a solid gel removing any excess liquid, eliminating any possibility of leaching. This final solid state provides compliance with the liquid paint filter test seen in some state regulations for landfill disposal.

Narc Gone<sup>®</sup> MX is designed for the disposal of both solid and liquid schedule I illicit narcotics. It can also be used for destruction of all forms of non-hazardous, controlled and non-controlled medications, including pills, capsules, tablets, creams, fentanyl and nicotine patches, suppositories and liquids.

The finished (full) Narc Gone<sup>®</sup> MX bottle may be discarded into the regular waste stream, but we recommend checking with local, state, federal, and tribal authorities before determining final disposition.\*

**The Detailed Testing Report can be found in the LSS Technology Assessment Catalog**

Now available in 1-gallon containers, along with 2.5-gallon, 5.0-gallon, and 30-gallon sizes with easy-on-off lids.
